Bingo – Dan's notes attached describe the (b) (6) well as a 1.5 ft. diameter clay tile, approx. 4 feet deep below basement floor and 1.5 ft. to water.

Sorry no photos (I can find).

Hi Joel, was there anything for the (b) (6) well? It looks like Dan sampled it right before it was connected to Town Water – October 2010. I can contact Dan as well.

Thanks.

Hi Joel, I'm trying to assist the consultant working with EPA to list the JARD site for Superfund and they requested any documentation we might have on the construction of the (b) (6) well. I looked through my files and emails and I'm not seeing anything that was written that described how the well was constructed. Does JCO have any of Dan's field notes that might have this information?

Hello Trish – I spoke w/matt morse contractor this am, he was at the (b) (6) w/his plumber to scope out what's needed in the basement to switch over and dismantle the current pump / pressure tank arrangement. I gave him (b) (6) # and he hopes to look in his basement as well. I hope to hear later today from him. I also have a call in w/terry morse about the Towns additional cost associated w/some pvt. Repair.

Hi Joel and Dan,  
I recieved a call from (b) (6). He was wondering what was going on. I let him know that you were trying to arrange everything with the contractors and were hoping to have the work started the first of NOvember. I also told him I would ask you to contact him to discuss the plans. His cell phone number is: (b) (6)  
I let (b) (6) know that I would try to get down there to collect a water sample within the next two weeks, unless either of you have plans to travel south before then.

Thanks - Trish

Location Jard - Bennington, VT Date 10/24/10
